

Ozone Cabin 995.00

high quality italian laundry equipment

995.00

OZONE CABIN, FOR DECONTAMINATION AND DEODORISATION OF GARMENTS, FOOTWEAR AND CLOTHING ACCESSORIES IN GENERAL.

Fimas proposes this new model of Cabin with ozone production system in purity (AMCS ozone © technology filed), without toxic reaction by-products (unique on the market). This machine is indispensable for completing and optimizing the cleaning and sanitizing service that the new-generation Laundries must offer to its customers.

This service can guarantee a 360 degree coverage against the risks deriving from the presence of human bio-effluents, pollutants present in the air, mites, germs, bad smells and anything else unpleasant is present in many garments which by their nature and / or composition can not be washed with water or dry but which require an important and incisive specific treatment for their cleaning. Cabin treatment reduces 99% of the organic and inorganic substances present on the garments.

A preset work cycle of about 30 minutes: ozone production, penetration into clothing and suction, without any ozone dispersion in the environment at the end of the cycle. The cabin works tightly, with a locking device that prevents opening during work, in absolute safety for both the operator and the people present in the environment.

Compact and elegant - 75 x 75 cm -, totally built in stainless steel, has a capacity that allows you to receive accessories and bulky equipment, with the possibility of hanging clothes and accessories on special hanger bars.

This cabin can be inserted ergonomically into the store structure, reinforcing the idea and the concept of providing customers with a high-end, effective, natural and ecological service. On request a larger version - 75 x 100 cm - is available for the treatment of particularly bulky items and equipment.
